	Students' Graduation Project Abstract

Department:		**Semester:**	Spring-2022
Project Title:	Aviation coordination		
Supervisor:	Dr. Ezzat Elaggan		

Abstract:

The aim of an Emergency Response Plan (ERP) is to guide local government and the Airport Authority in responding promptly to aerodrome emergencies and other unexpected events, therefore limiting the possibility and amount of personal injury and property damage of the facilities. Planning, communication, and readiness are critical components of an efficient coordination of Safety, Security, and Emergency Response Plan. The ERP operations and supporting agencies' staff must develop the discipline necessary to address this vital task through prevention and preparation for the multitude of ground or air events that could occur, particularly in these days of heightened security. Our goal is to ensure the highest possible level of public and aircrew safety. To be successful, the Safety, Security, and Emergency Response Plan policies must be communicated effectively to all persons and agencies involved.
